

MOTOR VEHICLE ACCESS

Please note: The following background information should be read in association with the *Wet Tropics Plan Review Information Booklet*

Zoning maps depict roads where motor vehicle use is allowed by the public.

Road Classes

The Plan's zoning maps display five categories of roads in the WHA. These are as follows:

- *State-controlled road:* roads which form part of the State's road network.
- *Community access road:* significant roads for local community transport.
- *Presentation road:* roads which provide opportunities for presentation of the WHA
- *Presentation (restricted) road:* presentation roads where a permit is required for use of a motor vehicle.
- *Management road:* roads to provide access for management and research purposes. General public use of these roads is not considered appropriate.

Please note: Wet Tropics road classifications only affect access by motorised vehicles. They do not affect access by mountain bike, horse or pedestrian traffic as these activities are not regulated under the Plan. However, other legislation may affect such use in the WHA. For example horse riding is not allowed in National Parks.

Roads which provide access to private land in the WHA (defined as 'lawful access roads' under the Plan) are not depicted on zoning maps.

Proposed amendments to the Plan will also include the ability for the Authority to issue a permit for the operation of a motor vehicle 'off-road' for conservation purposes, research, maintenance of walking tracks and infrastructure maintenance.

What are the proposed changes

The proposed changes are to better reflect the stated management purpose of these roads. Consideration of appropriate motor vehicle access takes into account the interests of land managers, infrastructure agencies, visitors, the tourism industry and the community; while at the same time recognising the responsibilities of the Authority to protect the integrity of the Area against the impacts caused by roads and road use.

Table 1 lists all roads depicted on zoning maps and identifies any proposed change to their classification.

What will this mean?

These proposed changes will result in the following:

- a significant increase in the number of roads listed as 'presentation roads' (i.e. no permit required) and a corresponding decrease in the number of roads listed as 'presentation restricted (i.e. permit required)
- a reduction in the total length of 'management roads' primarily because they are no longer required for management purposes.
